Test 17:

READING PASSAGE 1

A BRIEF HISTORY OF TEA

A

The story of tea began in ancient China over 5,000 years ago. According to legend, the Emperor Shen Nung was a skilled ruler, creative scientist and patron of the arts. His farsighted edicts required, among other things, that all drinking water be boiled as a hygienic precaution. One summer day while visiting a distant region of his realm, he and the court stopped to rest. In accordance with his ruling, the servants began to boil water for the court to drink. Dried leaves from a nearby bush fell into the boiling water, and as the leaves infused the water turned brown. As a scientist, the Emperor was intrigued by the new liquid, drank some, and found it very refreshing. And so, according to legend, tea was created.

B

Tea consumption spread throughout Chinese culture, reaching into every aspect of the society: The first definitive book was written on tea - a book clearly reflecting Zen Buddhist philosophy - 1,200 years ago. The first tea seeds were brought to Japan by a returning Buddhist priest, who had seen the value of tea in enhancing meditation in China. As a result, he is known as the 'Father of Tea' in Japan. Because of this early association, tea in Japan has always been linked with Zen Buddhism. Tea received the Japanese Emperors support almost instantly and spread rapidly from the royal court and monasteries to other sections of society.

C

Tea was elevated to an art form in the Japanese tea ceremony, in which supreme importance is given to making tea in the most perfect, most polite, most graceful, most charming manner possible. Such a purity of expression prompted the creation of a particular form of architecture for tea house: duplicating the simplicity of a forest cottage. The cultural/artistic hostesses of Japan, the geishas, began to specialize in the presentation of

the tea ceremony. However, as more and more people became involved in the excitement surrounding tea, the purity of the original concept was lost, and for a period the tea ceremony became corrupted, boisterous and highly embellished. Efforts were then made to return to the earlier simplicity, with the result that, in the 15th and 16th centuries, tea was viewed as the ultimate gift. Even warlords paused for tea before battles.

D

While tea was at this high level of development in parts of Asia, information concerning the then unknown beverage began to filter back to Europe. Earlier traders had mentioned it, but were unclear as to whether tea should be eaten or drunk. The first European to personally encounter tea and write about it was Portuguese - Portugal, with her technologically advanced navy, had been successful in gaining the first right of trade with China.

E

Tea finally arrived in Europe in the 16th century, brought to Holland by the country's navy, and becoming very fashionable in the Dutch capital, the Hague. This was due in part to tea being very expensive (over $100 per pound), which immediately made it the domain of the wealthy. Slowly, as the amount of tea imported increased, the price fell, and by 1675 it was available in common food shops throughout Holland.

F

As the consumption of tea increased dramatically in Dutch society, doctors and university authorities in Holland argued as to its benefits or drawbacks. The public largely ignored the scholarly debate and continued to enjoy their new beverage, through the controversy lasted from 1635 to roughly 1657. Throughout this period, France and Holland led Europe in the use of tea.

G

As the craze for all things oriental swept through Europe, tea became part of the way of life. Adding milk to the drink was first mentioned in 1680. Around that time, Dutch inns provided the first restaurant service of tea. Innkeepers would furnish guests with a portable tea set complete with a heating unit. The Dutchman would then prepare tea for himself and his friends outside in the inn garden. Tea remained popular in France for only about fifty years,

being replaced by a preference for wine, chocolate, and exotic coffees. Tea was introduced into England in 1660 by King Charles II and his Portuguese queen, who were both confirmed tea drinkers. Tea mania swept across England as it had earlier spread throughout France and Holland. By 1708 tea importation had risen to thirteen times the 1699 level. Tea was drunk by all levels of society.

H

The Russian interest in tea began as early as 1618, when the Chinese embassy in Moscow presented several chests of tea to the Emperor, Czar Alexis. Later in the century, a trade treaty between Russia and China allowed caravans to cross back and forth freely between the two countries. Still, the journey was not easy. The average caravan consisted of 200 to 300 camels, and the 18,000-kilometre trip took over 16 months to complete. Eventually, however, tea became - as it still is - one of the most popular drinks in the country.

TRUE IELTS

Questions 1–8

*Reading Passage 1 has eight paragraphs **A–H**.*

Choose the correct heading for each paragraph from the list of headings below.

*Write the correct number, **i–x**, in boxes 1–8 on your answer sheet.*

List of Headings

i	Not enough tea to meet demand
ii	Religious objections
iii	In – and sometimes out – of fashion
iv	A connection between tea and religion
v	A luxury item
vi	News of tea reaches another continent
vii	Is tea a good or a bad thing?
viii	A chance discovery
ix	Tea-making as a ritual
x	Difficulties in importing tea

1. Paragraph **A**
2. Paragraph **B**

3. Paragraph **C**
4. Paragraph **D**
5. Paragraph **E**
6. Paragraph **F**
7. Paragraph **G**
8. Paragraph **H**

Questions 9–13

Look at the following statements (Questions 9–13) and the list of countries below.

*Match each statement with the correct country, **A–G**.*

*Write the correct letter, **A–G**, in boxes 9–13 on your answer sheet.*

9 Claims that tea might be harmful failed to affect its popularity.

10 Tea lost favour to other drinks.

11 Special buildings were constructed in which to drink tea.

12 Animals were involved in importing tea.

13 A ruler's specialist knowledge led to an interest in tea.

List of Countries

A China

B Japan

C Portugal

D Holland

E France

F England

G Russia

ĐÁP ÁN:

1. **Paragraph A: viii (A chance discovery)**
    - *Lý do:* Đoạn văn kể về việc những chiếc lá khô từ một bụi cây gần đó vô tình rơi vào nồi nước đang sôi của Hoàng đế Thần Nông, dẫn đến sự ra đời của trà
    - Paragraph A recounts the legend of how tea was created when leaves from a bush accidentally fell into Emperor Shen Nung's boiling water.
2. **Paragraph B: iv (A connection between tea and religion)**
    - *Lý do:* Đoạn này nhắc đến việc trà gắn liền với triết học Thiền tông (Zen Buddhist) và được các nhà sư mang từ Trung Quốc về Nhật Bản để hỗ trợ việc thiền định
    - Paragraph B explains that tea was brought to Japan by a Buddhist priest to enhance meditation and "has always been linked with Zen Buddhism."
3. **Paragraph C: ix (Tea-making as a ritual)**
    - *Lý do:* Đoạn văn mô tả chi tiết về trà đạo Nhật Bản, coi việc pha trà như một loại hình nghệ thuật với các nghi thức chuẩn mực, lịch sự và duyên dáng
    - Paragraph C describes the Japanese tea ceremony as an "art form" where making tea is done in the "most perfect, most polite, most graceful... manner possible."
4. **Paragraph D: vi (News of tea reaches another continent)**
    - *Lý do:* Nội dung nói về việc thông tin về trà bắt đầu được truyền từ châu Á sang châu Âu thông qua các thương nhân và người Bồ Đào Nha

- Paragraph D states that "information concerning the then unknown beverage began to filter back to Europe."

5. **Paragraph E: v (A luxury item)**
    - *Lý do:* Khi trà mới đến Hà Lan, nó rất đắt đỏ (hơn 100 USD/pound), do đó nó chỉ dành cho giới thượng lưu và giàu có
    - Paragraph E notes that tea in Europe was initially "very expensive (over $100 per pound), which immediately made it the domain of the wealthy."
6. **Paragraph F: vii (Is tea a good or a bad thing?)**
    - *Lý do:* Các bác sĩ và giới học thuật ở Hà Lan đã tranh luận về lợi ích (benefits) và tác hại (drawbacks) của trà
    - Paragraph F describes the "scholarly debate" in Holland where doctors and authorities "argued as to its benefits or drawbacks."
7. **Paragraph G: iii (In – and sometimes out – of fashion)**
    - *Lý do:* Trà từng rất phổ biến ở Pháp trong khoảng 50 năm nhưng sau đó bị thay thế bởi rượu và cà phê (lỗi mốt), trong khi ở Anh nó lại tạo nên một cơn sốt (hợp mốt)
    - Paragraph G explains that tea "remained popular in France for only about fifty years, being replaced by a preference for wine, chocolate, and exotic coffees," showing it went out of fashion there.
8. **Paragraph H: x (Difficulties in importing tea)**
    - *Lý do:* Mô tả hành trình gian khổ để mang trà đến Nga bằng các đoàn lạc đà, vượt quãng đường 18.000 km trong hơn 16 tháng
    - Paragraph H describes the journey to Russia by caravan as not easy, consisting of "200 to 300 camels, and the 18,000-kilometre trip took over 16 months to complete."

9. D (Holland)

- *Lý do:* Đoạn F ghi rằng mặc dù các bác sĩ và giới học thuật tranh luận về lợi ích hay tác hại của trà, công chúng Hà Lan phần lớn vẫn lờ đi và tiếp tục thưởng thức đồ uống này
- Paragraph F says that in Holland, "The public largely ignored the scholarly debate and continued to enjoy their new beverage," so its popularity was not affected by claims of harm.

10. E (France)

- *Lý do:* Đoạn G đề cập trà chỉ phổ biến ở Pháp trong khoảng 50 năm, sau đó bị thay thế bởi rượu, socola và cà phê ngoại nhập
- Paragraph G states that in France, tea was "replaced by a preference for wine, chocolate, and exotic coffees."

11. B (Japan)

- *Lý do:* Đoạn C mô tả việc tạo ra các hình thái kiến trúc riêng biệt cho các trà thất (tea houses) tại Nhật Bản để phục vụ trà đạo
- Paragraph C notes that the purity of the tea ceremony "prompted the creation of a particular form of architecture for tea house."

12. G (Russia)

- *Lý do:* Đoạn H cho biết trà được vận chuyển đến Nga bằng các đoàn lữ hành gồm 200 đến 300 con lạc đà
- Paragraph H explains that trade with Russia involved "caravans" consisting of "200 to 300 camels."

13. A (China)

- *Lý do:* Đoạn A kể về Hoàng đế Thần Nông của Trung Quốc, một nhà khoa học tài năng, nhờ thói quen đun sôi nước và sự tò mò khoa học mà ông đã phát hiện ra trà
- Paragraph A describes how Emperor Shen Nung, a "creative scientist," was intrigued by the new liquid and drank it, leading to the creation of tea.

READING PASSAGE 2

Herbal Medicines

The popularity of herbs and plants as medicines could be good for New Zealand

A There is an age-old practice of harvesting plants and herbs in their natural environment for use as medicines. And today there is huge potential for New Zealand to develop a herb industry based on the excellent growing conditions and expertise there, according to Phil Rasmussen, a pharmacist and medical herbalist. Take arnica, for example, a popular pharmaceutical herb used to treat bruises and joint problems. Traditionally collected by Romany communities in Europe, it is now in high demand worldwide as interest develops in the capabilities of the small alpine plant. A 2008 report for the Plant and Food Research organisation concluded that New Zealand has a good opportunity to cultivate arnica flowers and roots for the international markets. However, the initiative was stopped in its tracks when the government abruptly halted funding for the research programme. It was an unjustified move, according to agronomist Malcolm Douglas, based on a number of inaccurate views about weed invasion.

B The history of herbal medicines in New Zealand has long featured disagreements of this sort. For the early Maori people – the original inhabitants of New Zealand – the forest was well stocked with edible plants that were an obvious source of nutrition, but that were taken for the relief of pain as well. While the earliest European doctors in New Zealand relied on imported dried herbs, many were keen to include native plants in their practices: in his book published in 1891, herbalist James Neil described manuka and koromiko as among New Zealand's most valuable herbs. Despite its popularity among some, however, herbalism continued to have its detractors. In 1907 Neil, president of the then very young New Zealand Association of Medical Herbalists (NZAMH), petitioned parliament for legal status for herbalists, but he was unsuccessful. The Evening Post newspaper perhaps summed up the opposing position by claiming that herbalism 'is obsolete'.

C In fact, traditional Maori medicine faced a more determined challenge. In 1908 the government passed a controversial law that had the effect of restricting traditional herbal practice, or pushing it underground. Then for a brief period in the mid-20th century, herbal medicine was largely ignored, shunned by the majority of the medical profession, and absent from medical school curricula. But a centuries-old tradition was not going to disappear so easily, and in the 1980s the NZAMH was revived, and it became possible to complete a course in herbal medicine at several polytechnics around the country. However, the problem

remained of how to connect the culture of plant-based medicine with conventional scientific thinking in order to promote herbal use within the general population. For many years, the limited evidence there was that herbal medicines worked was undermined by lack of interest among general practitioners and within the scientific community.

D Today, the ideas of herbalists in the 1980s – eat a varied diet, include lots of fresh fruit and vegetables, recognise stress – are completely accepted by the medical establishment and widely practised in society as a whole. Natural health products are big sellers in pharmacies, and global pharmaceutical companies are buying up natural supplement brands or developing their own. What's more, according to Rasmussen, robust clinical trials show that herbal medicine is generally safe – safer than most drugs. 'It doesn't do everything,' he says, 'but there's a lot it does do, particularly in terms of preventative health care.' One significant issue for today's export-oriented herbal medicine producers is the question of how to guarantee standards for consumers in different countries. In other words, there is the need for some form of globally recognised system of documentation. Rasmussen's range of extracts are produced under the Good Manufacturing Practice (GMP) scheme, which is respected around the world. So too is the range produced by Sandra Clair, who says that such assurance is expensive but necessary if you want to export herbal remedies to the rest of the world. Moves to launch a joint Australia–New Zealand agency to regulate herbal remedies under a single, streamlined licensing process have recently been revived, after being abandoned in 2007 through lack of support in parliament.

E There are those in the industry who support further regulation still. According to Rasmussen, some herbs should require a prescription from a suitably qualified medical herbalist or doctor. For example, consumers shouldn't be able to go to their local supermarket and buy St John's Wort, according to Rasmussen, because it can interact in harmful ways with at least ten pharmaceutical drugs. Isla Burgess, who is part of the International Research Group for the Conservation of Medicinal Plants, agrees that tighter regulation is necessary, but for a different reason. 'More than 400,000 tonnes of medicinal and aromatic plants are traded in the world each year,' says Burgess. 'The great majority of these are harvested from the wild, so they each have an impact on their local ecosystem.' She gives the example of elm trees in the USA, ringbarked and stripped for the growing market for a product called 'slippery elm'; this endangered tree should be protected. But others argue that more regulation would be prohibitively expensive for all but the largest manufacturers – a change, cautions Clair, that would probably put some local companies out of business. So, for the time being at least, it seems that the topic of herbal medicines will continue to provoke debate.

Questions 14–17

Reading Passage 2 has five paragraphs, ***A–E****.*

Which paragraph contains the following information?

Write the correct letter, ***A–E****, in boxes 14–17 on your answer sheet.*

NB *You may use any letter more than once.*

14 a reference to the interest shown by large corporations in herbal remedies

15 examples of the uses of one particular herbal medicine

16 a warning that small companies cannot afford stricter controls of the herbal medicine industry

17 a statement by one expert about the effectiveness and limitations of herbal medicines

Questions 18–21

Complete the summary below.

Choose ***ONE WORD ONLY*** *from the passage for each answer.*

Write your answers in boxes 18–21 on your answer sheet.

The history of herbal medicines in New Zealand

Originally, the Maori people consumed plants to help deal with **18** _____, and also as food. When Europeans settled in the country, a **19** _____ by James Neil showed that some of them also recognised the medicinal value of native plants. However, criticism of herbal medicine appeared in one newspaper in 1907. The following year, the use of herbal medicines was made more difficult because of a new **20** _____, and for a time in the mid-20th century, they were largely ignored. Then in the 1980s a number of institutions started offering a **21** _____ in the subject, although for many years there was still little evidence to support their use, because doctors and academics were not interested.

Questions 22–26

Look at the following statements (Questions 22–26) and the list of people below.

Match each statement with the correct person, ***A, B, C or D****.*

Write the correct letter, ***A, B, C or D****, in boxes 22–26 on your answer sheet.*

NB *You may use any letter more than once.*

22 There ought to be restrictions on where you can buy some herbal medicines.

23 The authorities stopped supporting one project without a good reason.

24 The herbal medicine industry has an effect on the environment where some plant-based medicines are found.

25 New Zealand has the human resources and natural environment to grow herbs commercially.

26 It is essential for herbal medicines to have international certification, despite the cost.

List of People

A Phil Rasmussen
B Malcolm Douglas
C Sandra Clair
D Isla Burgess

ĐÁP ÁN:

14. D (Đề cập đến việc các tập đoàn dược phẩm toàn cầu đang mua lại các thương hiệu thực phẩm bổ sung tự nhiên)

Đoạn chứa đáp án:

Natural health products are big sellers in pharmacies, and global pharmaceutical companies are buying up natural supplement brands or developing their own.

15. A (Ví dụ về công dụng của cây arnica dùng để điều trị vết bầm tím và các vấn đề về khớp)
Đoạn chứa đáp án:

Take arnica for example, a popular pharmaceutical herb used to treat bruises and joint problems

16. E (Cảnh báo từ Sandra Clair rằng các quy định thắt chặt có thể khiến một số công ty địa phương phá sản vì chi phí cao)

Đoạn chứa đáp án:

But others argue that more regulation would be prohibitively expensive for all but the largest manufacturers - a change, cautions Clair, that would probably put some local companies out of business.

17. D (Phát biểu của Phil Rasmussen về việc thảo dược an toàn cho sức khỏe dự phòng nhưng "không làm được mọi thứ")

Đoạn chứa đáp án:

‘It doesn’t do everything, ’he says, ’but there’s a lot it does do, particularly in terms of preventative health care.

18. pain (Người Maori ban đầu tiêu thụ thực vật để giảm đau và làm thực phẩm)

Đoạn chứa đáp án:

For the early Maori people the original inhabitants of New Zealand the forest was well stocked with edible plants that were an obvious source of nutrition, but that were taken for the relief of pain as well.

19. book (Cuốn sách xuất bản năm 1891 của James Neil mô tả giá trị của các loài cây bản địa)

Đoạn chứa đáp án:

While the earliest European doctors in New Zealand relied on imported dried herbs, many were keen to include native plants in their practices: in his book published in 1891, herbalist James Neil described manuka and koromiko as among New Zealand's most valuable herbs.

20. law (Năm 1908, một đạo luật mới được thông qua làm hạn chế việc thực hành thảo dược truyền thống)

Đoạn chứa đáp án:

In fact, traditional Maori medicine faced a more determined challenge. In 1908 the government passed a controversial law that had the effect of restricting traditional herbal practice, or pushing it underground.

21. course (Vào những năm 1980, một số trường bách khoa bắt đầu cung cấp các khóa học về môn học này)

Đoạn chứa đáp án:

But a centuries-old tradition was not going to disappear so easily, and in the 1980s the NZAMH was revived, and it became possible to complete a course in herbal medicine at several polytechnics around the country.

22. A (Phil Rasmussen — Cho rằng nên có hạn chế về nơi bán một số loại thảo dược như St John’s Wort)

Đoạn chứa đáp án:

According to Rasmussen, some herbs should require a prescription from a suitably qualified medical herbalist or doctor.

23. B (Malcolm Douglas — Chỉ trích chính quyền dừng tài trợ cho dự án nghiên cứu arnica mà không có lý do chính đáng)

Đoạn chứa đáp án:

However, the initiative was stopped in its tracks when the government abruptly halted funding for the research programmer. It was an unjustified move, according to agronomist Malcolm Douglas, based on a number of inaccurate views about weed invasion.

24. D (Isla Burgess — Việc thu hoạch thảo dược ngoài tự nhiên gây tác động đến hệ sinh thái địa phương)

Đoạn chứa đáp án:

'The great majority of these are harvested from the wild, so they each have an impact on their local ecosystem.'She gives the example of elm trees in the USA ringbarked and stripped for the growing market for a product called 'slippery elm': this endangered tree should be protected.

25. A (Phil Rasmussen — Tin rằng New Zealand có điều kiện trồng trọt và chuyên môn tốt để phát triển ngành thảo dược)

Đoạn chứa đáp án:

And today there is huge potential for New Zealand to develop a herb industry based on the excellent growing conditions and expertise there, according to Phil Rasmussen, a pharmacist and medical herbalist.

26. C (Sandra Clair — Khẳng định chứng nhận quốc tế là đắt đỏ nhưng cần thiết để xuất khẩu)

Đoạn chứa đáp án:

So too is the range produced by Sandra Clair, who says that such assurance is expensive but necessary if you want to export herbal remedies to the rest of the world.

TRUE IELTS

READING PASSAGE 3

A CLOSER EXAMINATION OF A STUDY ON VERBAL AND NON-VERBAL MESSAGES

A study of non-verbal communication carried out in 1967 continues to be widely quoted today. David Lapakko looks at limitations in the original study.

Description of the Study

The findings of a study on verbal and non-verbal messages in communication by Albert Mehrabian and his colleagues at UCLA* in 1967 have been quoted so frequently that they are now often regarded as a self-evident truth.

In the first experiment, subjects were asked to listen to a recording of a female saying the word '*maybe'* in three tones of voice to convey liking, neutrality and disliking. The subjects were then shown photos of female faces expressing the same three emotions and were asked to guess the emotions in the recorded voice and the photos. It was found that the photos got more accurate responses than the voices. In the second experiment, subjects listened to nine recorded words spoken in different tones of voice. Three words had positive meanings (e.g. *honey),* three were neutral (e.g. *oh)* and three were negative (e.g. *terrible).* Again, the subjects had to guess the speaker's emotions. It was found that tone of voice carried more meaning than the individual words. From these experiments the researchers concluded that 7% of our feeling towards a speaker is based on the actual words they use, 38% on their tone of voice, and 55% on their body language (e.g. facial expression).

Methodological Issues

However, a closer look at the study reveals several limitations. The first is that the entire study involved only 62 subjects. Of these, 25 were used to select the word for the first experiment, while the key issue - comparing verbal and non-verbal communication - was determined by only the 37 remaining subjects. All were female undergraduates who participated as part of their introductory psychology course, and their ages and academic qualifications seem remarkably uniform. Thus, the findings may simply be a product of the nature of the sample.

Critics have also pointed out that the 7-38-55 formula is flawed since it was pieced together from two different experiments, neither of which involved all three channels (verbal, vocal, and facial). In addition, in the first experiment the single word *maybe* was used throughout so it was impossible for the effects of changes in verbal input to be assessed. The researchers intentionally used a 'neutral' word so naturally the subjects found little meaning there. Clearly, such a methodology lacks validity. In the real world, people communicate in a particular context and speak in phrases and full-blown sentences, making extensive use of the multi-faceted vehicle of language.

My concern is that interpretations of this study have gained such prominence in our pedagogical literature. This 7-38-55 formula appears in many basic texts, used for training in public speaking, interpersonal communication and organizational communication.

Lessons to consider

Clearly, one appealing aspect of the Mehrabian study is its numerical precision. Communication is a complex phenomenon, but it seems less so when we can rely on these three magical numbers. In contrast to the ambiguities of language, numbers seem to possess exactness. And the popular appeal of the study has given the 7-38-55 formula enormous credibility. There is a certain mystique about non-verbal communication, and the continued references to this research sustain it, encouraging people to believe in the overwhelming importance of the non-verbal message compared with the verbal one. Yet we know that even one ill-chosen word to a colleague or friend can make or break a communicative effort. 'Words do matter,' Bradley (1991), one of the few textbook writers to criticize the Mehrabian study, makes the same point when he observes, ‘If we could communicate 93% of information and attitudes with vocal and facial cues, it would be wasteful to spend time learning a language.’

Mehrabian himself believes his research should not be interpreted to devalue the role of language in communication, saying:

Please remember that alt my findings … dealt with communications of feelings and attitudes … it is absurd to imply or suggest that the verbal portion of all communication constitutes only 7% of the message … anytime we communicate abstract relationships (e.g. x=y – the square of z) clearly 100% of the entire communication is verbal. (Mehrabian, 1995)

To be fair, many textbook writers attempt to be faithful to the context of Mehrabian’s research. For example, Stewart and D’Angelo (1988) write: ‘Mehrabian argues that when we are uncertain about what someone’s feeling, or about how much we like him or her, we rely … only 7% on the words that are spoken.’ Others try to play down the specific percentages, saying that an understanding of the general importance of non-verbal cues is more important. Nonetheless, ether textbook authors simply use the numbers without placing any limits on their meaning.

Conclusion

Since this relatively small study was first published it has achieved an influence far beyond its intended scope. We need to put it into its proper perspective and learn some important lessons from it regarding social science research, communication pedagogy, and the forces which have created widespread misunderstanding about communication.

UCLA: University of California at Los Angeles*

Questions 27–30

Complete the summary using the list of words and phrases, A–H, below.

Write the correct letter, A–H, in boxes 27–30 on your answer sheet.

Mehrabian's 1967 study

Albert Mehrabian and his colleagues carried out an influential study comparing the **27** _____ of verbal and non-verbal communication. This involved two experiments. In both experiments, subjects had to identify the **28** _____ being communicated by other people. The two main areas focused on in the first experiment were voice tones and **29** _____, while the second focused mainly on voice tones and **30** _____.

A facial expressions
B purposes
C printed words
D effects
E words meanings
F gender differences
G feelings
H characteristics

Questions 31–35

Do the following statements agree with the views of the writer in Reading Passage 3?

In boxes 31–35 on your answer sheet, write

YES — if the statement agrees with the views of the writer
NO — if the statement contradicts the views of the writer
NOT GIVEN — if it is impossible to say what the writer thinks about this

31 One limitation of the study was that there were: too few subjects involved.

32 The fact that the subjects in the study came from a similar background was an advantage.

33 The two experiments should have been carried out in a different order.

34 The researchers' choice of a neutral word was helpful in the context of the study.

35 The study would have been more valid if it had included a range of languages.

Questions 36–40

Choose the correct letter, A, B, C or D.

Write the correct letter in boxes 36–40 on your answer sheet.

36 What does the writer say about the "numerical precision" of Mehrabian's study?

A It makes the claims more attractive.
B It is the strongest point of the study.
C It will appeal to superstitious people.
D It allows comparison between languages.

37 What does the writer say about the popularity of the 7–38–55 formula?

A It is unlikely to maintain its present status.
B It is leading to an undervaluing of words.
C It should be applied in a more practical way.
D It may help understanding of non-verbal messages.

38 What point is Bradley making about language learning?

A Language could be learned more efficiently than it is.
B More research is needed into attitudes to communication.
C More time should be spent looking at tone and body language.
D Language must be important since we make an effort to acquire it.

39 What does Mehrabian himself say about his findings?

A They are relevant to only one area of communication.
B It is only in maths that 100% of communication is verbal.
C Feelings are more difficult to communicate than numerical facts.
D Non-verbal communication is the main part of the message.

40 What is the writer's purpose in the paragraph beginning "To be fair…"?

A To justify the strong points of Mehrabian's study.
B To outline other research on non-verbal behaviour.
C To present varying interpretations of Mehrabian's study.
D To show that textbooks tend to ignore non-verbal behaviour.

ĐÁP ÁN:

27. D (effects): Albert Mehrabian và các đồng nghiệp đã thực hiện một nghiên cứu có sức ảnh hưởng nhằm so sánh **tác động** của giao tiếp bằng lời và không lời .

28. G (feelings): Trong cả hai thí nghiệm, đối tượng phải xác định **cảm xúc** đang được người khác truyền tải

29. A (facial expressions): Hai lĩnh vực chính được tập trung trong thí nghiệm đầu tiên là tông giọng và **biểu cảm khuôn mặt**

30. E (word meanings): Thí nghiệm thứ hai tập trung chủ yếu vào tông giọng và **nghĩa của từ**

31. YES: Một hạn chế của nghiên cứu là có quá ít đối tượng tham gia (chỉ có 62 người)

32. NO: Việc các đối tượng trong nghiên cứu có nền tảng tương đồng (nữ sinh viên tâm lý) là một lợi thế (Tác giả cho rằng đây là một điểm yếu vì mẫu không đại diện)

33. NOT GIVEN: Bài đọc không đề cập đến việc hai thí nghiệm có nên được thực hiện theo thứ tự khác hay không

34. NO: Việc các nhà nghiên cứu chọn một từ trung tính (neutral word) là có ích trong bối cảnh nghiên cứu (Tác giả cho rằng việc này làm thiếu tính xác thực so với thực tế)

35. NOT GIVEN: Không có thông tin về việc nghiên cứu sẽ có giá trị hơn nếu bao gồm nhiều ngôn ngữ khác nhau

36. A: Sự "chính xác về số liệu" giúp các khẳng định trở nên thu hút hơn

37. B: Sự phổ biến của công thức 7–38–55 đang dẫn đến việc đánh giá thấp vai trò của ngôn từ

38. D: Bradley muốn nhấn mạnh rằng ngôn ngữ chắc chắn rất quan trọng vì chúng ta đã nỗ lực để học nó

39. A: Bản thân Mehrabian nói rằng những phát hiện của ông chỉ liên quan đến một lĩnh vực giao tiếp (cảm xúc và thái độ)

40. C: Mục đích của đoạn văn bắt đầu bằng "To be fair..." là để trình bày các cách giải thích khác nhau về nghiên cứu của Mehrabian

TRUE IELTS
