Test 5:

READING PASSAGE 1

*You should spend about 20 minutes on **Questions 1–13**, which are based on Reading Passage 1 below.*

The Impact of the Potato

Jeff Chapman relates the story of history's most important vegetable

The potato was first cultivated in South America between three and seven thousand years ago, though scientists believe they may have grown wild in the region as long as 13,000 years ago. The genetic patterns of potato distribution indicate that the potato probably originated in the mountainous west-central region of the continent.

Early Spanish chroniclers who misused the Indian word *batata* (sweet potato) as the name for the potato noted the importance of the tuber to the Incan Empire. The Incas had learned to preserve the potato for storage by dehydrating and mashing potatoes into a substance called chuño, which could be stored in a room for up to 10 years, providing excellent insurance against possible crop failures. As well as using the food as a staple crop, the Incas thought potatoes made childbirth easier and used them to treat injuries.

The Spanish conquistadors first encountered the potato when they arrived in Peru in 1532 in search of gold, and noted Inca miners eating chuño. At the time the Spaniards failed to realize that the potato represented a far more important treasure than either silver or gold, but they did gradually begin to use potatoes as basic rations aboard their ships. After the arrival of the potato in Spain in 1570, a few Spanish farmers began to cultivate them on a small scale, mostly as food for livestock.

Throughout Europe, potatoes were regarded with suspicion, distaste and fear. Generally considered to be unfit for human consumption, they were used only as animal fodder and sustenance for the starving. In northern Europe, potatoes were primarily grown in botanical gardens as an exotic novelty. Even peasants refused to eat from a plant that produced ugly, misshapen tubers and that had come from a heathen civilization. Some felt that the potato plant's resemblance to plants in the nightshade family hinted that it was the creation of witches or devils.

In meat-loving England, farmers and urban workers regarded potatoes with extreme distaste. In 1662, the Royal Society recommended the cultivation of the tuber to the English government and the nation, but this recommendation had little impact. Potatoes did not become a staple until, during the food shortages associated with the Revolutionary Wars, the English government began to officially encourage potato cultivation. In 1795, the Board of Agriculture issued a pamphlet entitled *"Hints Respecting the Culture and Use of Potatoes"*;

this was followed shortly by pro-potato editorials and potato recipes in *The Times*. Gradually, the lower classes began to follow the lead of the upper classes.

A similar pattern emerged across the English Channel in the Netherlands, Belgium and France. While the potato slowly gained ground in eastern France (where it was often the only crop remaining after marauding soldiers plundered wheat fields and vineyards), it did not achieve widespread acceptance until the late 1700s. The peasants remained suspicious, in spite of a 1771 paper from the Faculté de Paris testifying that the potato was not harmful but beneficial. The people began to overcome their distaste when the plant received the royal seal of approval: Louis XVI began to sport a potato flower in his buttonhole, and Marie-Antoinette wore a purple potato blossom in her hair.

Frederick the Great of Prussia saw the potato's potential to help feed his nation and lower the price of bread, but faced the challenge of overcoming the people's prejudice against the plant. When he issued a 1774 order for his subjects to grow potatoes as protection against famine, the town of Kolberg replied: "The things have neither smell nor taste, not even the dogs will eat them, so what use are they to us?" Trying a less direct approach to encourage his subjects to begin planting potatoes, Frederick used a bit of reverse psychology: he planted a royal field of potato plants and stationed a heavy guard to protect this field from thieves. Nearby peasants naturally assumed that anything worth guarding was worth stealing, and so sneaked into the field and snatched the plants for their home gardens. Of course, this was entirely within Frederick's wishes.

Historians debate whether the potato was primarily a cause or an effect of the huge population boom in industrial-era England and Wales. Prior to 1800, the English diet had consisted primarily of meat, supplemented by bread, butter and cheese. Few vegetables were consumed, most vegetables being regarded as nutritionally worthless and potentially harmful. This began to change gradually in the late 1700s. The Industrial Revolution was drawing an ever-increasing percentage of the populace into crowded cities, where only the richest could afford homes with ovens or coal storage rooms, and people were working 12–16-hour days which left them with little time or energy to prepare food. High-yielding, easily prepared potato crops were the obvious solution to England's food problems.

Whereas most of their neighbours regarded the potato with suspicion and had to be persuaded to use it by the upper classes, Irish peasantry embraced the tuber more passionately than anyone since the Incas. The potato was well suited to the Irish soil and climate, and its high yield suited the most important concern of most Irish farmers: to feed their families.

The most dramatic example of the potato's potential to alter population patterns occurred in Ireland, where the potato had become a staple by 1800. The Irish population doubled to eight million between 1780 and 1841, without any significant expansion of industry or reform of agricultural techniques beyond the widespread cultivation of the potato. Though Irish landholding practices were primitive in comparison with those of England, the potato's high yields allowed even the poorest farmers to produce more healthy food than they needed with scarcely any investment or hard labour. Even children could easily plant, harvest and cook potatoes, which of course required no threshing, curing or grinding. The abundance provided by potatoes greatly decreased infant mortality and encouraged early marriage.

TRUE
IELTS

Questions 1–5

Do the following statements agree with the views of the writer in Reading Passage 1?

*In boxes **1–5** on your answer sheet, write:*

TRUE	if the statement agrees with the information
FALSE	if the statement contradicts the information
NOT GIVEN	if there is no information on this

1. Early Spanish chroniclers called the potato by the Incan name *chuño*.

2. The purpose of the Spanish coming to Peru was to find potatoes.

3. The Spanish believed that the potato had the same nutrients as other vegetables.

4. Peasants at that time did not like to eat potatoes because they were ugly.

5. The popularity of potatoes in the UK was due to food shortages during the war.

Questions 6–13

Complete the sentences below.

*Choose **ONE WORD ONLY** from the passage for each answer.*

*Write your answers in boxes **6–13** on your answer sheet.*

6. In France, people began to overcome their disgust towards potatoes because the King put a potato _____ in his buttonhole.

7. Frederick realised the potential of the potato, but he had to handle the _____ from ordinary people.

8. The King of Prussia adopted a form of _____ psychology to make people accept potatoes.

9. Before 1800, English people preferred eating _____ with bread, butter and cheese.

10. The obvious way to deal with England's food problems was high-yielding potato _____.

11. The Irish _____ and climate suited potatoes well.

12. Between 1780 and 1841, thanks to the _____ of the potato, the Irish population doubled to eight million.

13. The potato's high yields helped the poorest farmers to produce more healthy food almost without _____.

TRUE IELTS

ĐÁP ÁN:

1. **FALSE**
   (Người Tây Ban Nha dùng từ "batata" để gọi khoai tây; "chuño" là tên loại thực phẩm đã qua chế biến).
2. **FALSE**
   (Họ đến Peru để tìm vàng).
3. **NOT GIVEN**
   (Văn bản không so sánh quan điểm của người Tây Ban Nha về dinh dưỡng của khoai tây so với các loại rau khác).
4. **TRUE**
   (Nông dân từ chối ăn vì chúng có vẻ ngoài xấu xí - "ugly, misshapen tubers").
5. **TRUE**
   (Khoai tây trở thành lương thực chính nhờ tình trạng thiếu lương thực trong các cuộc Chiến tranh Cách mạng).
6. **flower**
   (Vua Louis XVI đã cài một bông hoa khoai tây vào khuy áo của mình).
7. **prejudice**
   (Frederick phải đối mặt với thử thách vượt qua định kiến của người dân).
8. **reverse**
   (Ông đã sử dụng một chút "tâm lý ngược" - reverse psychology).

11. **soil**
    (Khoai tây rất phù hợp với đất đai và khí hậu của Ireland).
12. **cultivation**
    (Dân số tăng gấp đôi nhờ việc canh tác khoai tây rộng rãi).
13. **investment**
    (Nông dân có thể sản xuất nhiều thực phẩm mà hầu như không cần đầu tư).

READING PASSAGE 2

*You should spend about 20 minutes on **Questions 14-26**, which are based on Reading Passage 2 below.*

The problem of graffiti

Is it art? Or is it a crime?

A The term 'graffiti' derives from the Italian word graffio meaning 'scratching', and can be defined as uninvited markings or writing scratched or applied to objects, built structures, and natural features. It is not a new phenomenon; examples can be found on ancient structures around the world, in some cases predating the Greeks and Romans. In such circumstances, it has acquired invaluable historical and archaeological significance as it provides a social history of life and events at that time. This is not true of more recent graffiti, which has become a pervasive problem particularly over the last 50 years, as a result of the availability of cheap and quick means of mark-making. These include the ubiquitous spray paints.

B Graffitists, the people who are responsible for creating graffiti, are indiscriminate about the surfaces they choose. Wherever graffiti appears, it is usually considered a priority to remove it as quickly as possible. One reason for this is to prevent 'copy-cat' emulation, which can occur rapidly once a clean surface is defaced, and so many companies and councils have a policy of removing graffiti within an hour or two of it being reported. Another reason is that as paints, glues, and inks dry out, they can become increasingly difficult to remove. A more important factor, however, is that graffiti can lead to more serious forms of vandalism and, ultimately, to the deterioration of a neighborhood area, and in this way contributes to a general social decline. For this reason, the police like to be notified of new graffiti incidents. To aid in achieving a successful prosecution, they encourage owners of properties to take photographs of any new graffiti, as there could be other related incidents occurring locally. An incidence pattern can help to identify possible culprits, as can their 'tag'—the distinctive mark graffitists leave to show the graffiti is their work.

C Any proposal to remove graffiti has to be carefully considered because techniques designed for robust or utilitarian surfaces may result in considerable damage to older, more historic buildings. Consequently, as no two sites are the same, there is no one treatment which will be suitable for all situations; each site must be looked at individually. The owners of some graffiti-affected sites may wish to attempt their own treatment, whereas others may prefer to contact a specialist contractor. However, whichever course is decided on, it is important to follow a systematic approach. The first step is to carry out cleaning trials to see which method is suitable for the removal of the graffiti media used, and also which method has the least impact on the site surface. These trials should be carried out on a small unobtrusive area if possible and should always start with the least aggressive cleaning method, usually water, and stop once a successful method has been found.

D Apart from water, a variety of methods can be used to remove graffiti; broadly, these are divided into chemical and mechanical systems. When using either of these systems, care must be taken with regard to protecting both passers-by and the person carrying out the graffiti removal. Chemical preparations are based on dissolving the graffiti media; these

solvents can range from mild to potentially dangerous chemical ‘cocktails’. When using chemicals, it is important to wear protective clothing, take measures to minimize any run-off of potentially harmful chemicals, and avoid the drifting of aerial mists. Mechanical systems are often in the form of wire-brushing and grit blasting, which attempt to chip off the graffiti media. Operators of mechanical systems must also wear protective clothing to avoid being hurt by hard airborne particles. This method often leaves marks on a surface.

E Different measures can be adopted to combat a recurring problem of graffiti. It is clear that protection measures will ultimately be more successful and less damaging than multiple removal treatments. Popular places for graffiti are often readily accessible flat surfaces where the graffiti will have an instant impact, but this is not always the case, and graffitists may scale bridges to give their work greater prominence. Possible protection measures may include a combination of floodlighting to illuminate dark areas and surveillance systems such as closed-circuit television. Research has shown that prominently placed cameras can reduce the incidence of graffiti in areas with a recurring problem. Unfortunately, the cost of any of these measures may be too high, and so physical obstacles such as fences, railings, doors, or gates can be introduced to discourage unauthorized access, though in some cases, these obstacles simply provide a new surface for graffiti.

F Another strategy is to apply a removable anti-graffiti barrier-coating as a form of preventive measure. Although this will not stop graffiti being applied, it will make its removal much easier and usually only involves using water, which reduces the possibility of damage to the site surface. Barrier coatings are usually applied by brush or spray, leaving a thin veneer that essentially serves to isolate the graffiti from the surface. So, although there is no prescription for dealing with every graffiti incident, there are some steps that can be taken to minimize the impact of graffiti and to protect vulnerable surfaces.

Questions 14 – 18

Reading Passage 2 has six paragraphs, ***A-F****.*

Which paragraph contains the following information?

Write the correct letter, ***A-F****, in boxes 14-18 on your answer sheet.*

NB *You may use any letter more than once.*

14 a suggestion that might assist in bringing an effective legal action against graffitists

15 an explanation why all instances of graffiti cannot be removed in the same way

16 an argument that graffiti can have a negative effect on community life

17 an admission that some strategies for tackling graffiti may lead to an increase in graffiti

18 some risks people face when graffiti is being removed

Questions 19 and 20

Choose ***TWO*** *letters,* ***A-E***

Write the correct letters in boxes 19 and 20 on your answer sheet

The article gives details about different methods of removing graffiti.

Which **TWO** points are made by the writer of this article?

A Chemicals are an expensive method of removing graffiti from surfaces.
B An inconspicuous part of a surface should be used to test a cleaning method.
C Alcohol-based chemical preparations are often successful at removing graffiti.
D Localised pollution can result from some cleaning methods.
E It is best to use the strongest available cleaning method.

TRUE IELTS

Questions 21 and 22

*Choose **TWO** letters, **A-E***

Write the correct letters in boxes 21 and 22 on your answer sheet

The writer describes ways of combating a recurring problem of graffiti.

Which **TWO** of these ideas are mentioned by the writer?

A running advertising campaigns against graffiti
B creating a new building material that repels graffiti
C hiring security guards and increasing police patrols
D ensuring surfaces are visible and monitored both day and night
E adding a covering layer that graffiti cannot penetrate

Questions 23 – 26

Complete the sentences below.

*Choose **NO MORE THAN TWO WORDS** from the passage for each answer.*

Write your answers in boxes 23-26 on your answer sheet.

23 Ancient graffiti is studied because it records a ..... of the culture of that period.

24 The unique signature of graffitists, known as a ....., can assist police in finding and prosecuting them.

25 Operators of both chemical and mechanical graffiti removal systems must have .....
.

26 Surfaces treated with a barrier-coating can normally be cleaned with ..... .

ĐÁP ÁN:

14. **B** (Gợi ý chủ sở hữu chụp ảnh để giúp cảnh sát nhận diện mô hình hoạt động và bắt giữ thủ phạm).
15. **C** (Giải thích vì mỗi địa điểm khác nhau nên không có một cách xử lý duy nhất phù hợp cho mọi tình huống).
16. **B** (Lập luận graffiti dẫn đến sự xuống cấp của khu dân cư và góp phần vào sự suy thoái xã hội nói chung).
17. **E** (Thừa nhận rằng các rào cản vật lý như hàng rào đôi khi lại cung cấp thêm bề mặt mới cho graffiti).
18. **D** (Đề cập đến rủi ro từ các "cocktail" hóa chất nguy hiểm và các hạt bụi cứng bay lơ lửng trong không khí).

19 & 20. **B, D** (Thứ tự có thể thay đổi)

- **B:** Nên thử nghiệm phương pháp làm sạch trên một khu vực nhỏ, khó thấy (unobtrusive area).
- **D:** Ô nhiễm cục bộ có thể xảy ra do hóa chất chảy tràn (run-off) hoặc bụi mài mòn (airborne particles).

21 & 22. **D, E** (Thứ tự có thể thay đổi)

- **D:** Sử dụng hệ thống chiếu sáng và camera giám sát để đảm bảo các bề mặt luôn được theo dõi (visible and monitored).
- **E:** Sử dụng lớp phủ bảo vệ (barrier-coating) để ngăn chặn graffiti thâm nhập vào bề mặt gốc.

23. **social history** (Graffiti cổ đại cung cấp một lịch sử xã hội về cuộc sống và các sự kiện thời bấy giờ).
24. **tag** (Dấu hiệu đặc trưng mà người vẽ để lại, được gọi là "tag", giúp cảnh sát xác định thủ phạm).
25. **protective clothing** (Người thực hiện cả hệ thống hóa chất và cơ học đều phải mặc quần áo bảo hộ).
26. **water** (Bề mặt có lớp phủ bảo vệ thường có thể được làm sạch chỉ bằng nước).

READING PASSAGE 3

*You should spend about 20 minutes on **Questions 27-40**, which are based on Reading Passage 3 below.*

The Peopling of Patagonia

Anthropologists continue to investigate human migration to Patagonia at the southern tip of South America

The human settlement of the southern extremity of the Americas has always fascinated prehistorians. Viewed from a global perspective, this was the last major continental land mass to be reached by human beings. The earliest occupation of Patagonia carries obvious implications for understanding when the North and South American continents were peopled, because it gives a baseline that all calculations regarding the rate of dispersion of humans throughout both continents must take into account.

For many years the human settlement of North and South America has been conceived of as beginning in the far north and travelling progressively southwards to Patagonia. However, fundamental disagreements developed concerning the length of time involved. Some scholars accepted a human presence in the Americas as early as 20,000 years ago, while others proposed that it could date no earlier than 8,000 years ago, and the debate is still with us today.

The idea of a relatively 'late' settlement of the Americas (around 8,000 years ago) implies that a rapid process of migration took place. Herein lies a second debate, which revolves around the question of how migration is to be understood. The 'late' model demands a hypothetical migration conceived of as a single, continually advancing wave of settlement. This has always been difficult to take seriously, and many scholars now support the idea of an 'early' model that sees the migration as a less ordered migration, and this is surely the most realistic scenario as migrants slowly adapted to the diverse natural habitats they would have met while travelling through the continent.

Those who argue for an earlier settlement, however, must contend with the lack of unequivocal evidence for archaeological sites older than around 14,000 years. Nevertheless, evidence for human occupation of the centre of South America is now securely dated to around 12,500 years ago at the Monte Verde site, which casts doubt on the 'late' model. The lack of archaeological evidence further south for this time period may be explained by the obstacle to humans on foot posed by the huge glacial streams that were present at that time.

We can speculate then that the retreat of the Patagonian glaciers around 14,000 years ago allowed the initial human intrusion into a pristine environment, which was similar to that of early post-glacial Europe. Human settlement of the vast horizontal expanse of treeless high country must have been tenuous at best, and the evidence for this occupation remains relatively scant, most of it coming from rock shelters in Argentina and Chile. There is, however, reliable evidence from these sites to confirm the presence of humans by around 11,000 years ago in different habitats, and some hints of an even older occupation. However, some other sites where evidence for even earlier human occupation was initially posited

have recently come under fresh scrutiny. This is because anthropologists have come to recognise that bones or other evidence may be deposited in caves by natural agency—in other words, by other forces such as floods or predators—and not necessarily by humans.

We shall turn now to a more detailed discussion of the archaeological evidence found in various parts of Patagonia. At the site located beside Chinchihuapi Creek, excavations have produced convincing evidence of human occupation, including hut foundations and wooden artefacts. They were buried in layers of peat, which has the property of preserving wood remarkably well, and as a result, radiocarbon dating tests have shown these artefacts to date from around 12,500 years ago. One of the most famous Patagonian sites is a cave known as Los Toldos. However, the evidence from this site has recently been called into question, because dispersed flecks of carbon used in the test process were taken unsystematically from many different places at the site. As a result, the association of this material with the artefacts is not at all clear. About 150 kilometres to the south is the site called El Ceibo, where a similar collection of artefacts to that found at Los Toldos has been discovered from the lowest levels of the dig, but as yet no radiocarbon dates are available, and this sort of analysis of the existing evidence is required before the site's value can be confirmed.

The Arroyo Eeo site is located very close to the high plateau. The artefacts from the earliest occupations were found at the same depth and have the same origins as those from Los Toldos, and have been securely dated to around 9,000 years ago. Another site that is mentioned in the debate is at Las Buitreras, where a number of stone flakes associated with bone remains of various animals have been discovered. However, anthropologists now believe that presumed cut marks on the bones are somewhat dubious, and despite detailed testing there is no way of securely relating any of these remains to human occupation. Finally, some 50 kilometres to the south is the site at Cueva Fell, which was the first Patagonian site to be systematically studied by modern archaeological methods. However, it is now recognised that the utility of this site must be restricted to its direct vicinity, given changes to the nearby area caused by flooding, and findings cannot be freely extrapolated further afield.

In conclusion, based on the evidence from a number of reliable sites, it seems probable that human populations reached Patagonia around 11,000 years ago.

Questions 27–31

Choose the correct letter, ***A, B, C or D****.*

Write the correct letter in boxes 27–31 on your answer sheet.

27 In the first paragraph, what is the writer's main point about migration to Patagonia?

A It started earlier than previously thought.
B Historians have overlooked its importance.
C It impacts on research into the wider region.
D Researchers have calculated its effects on the environment.

28 In the second paragraph, what is the writer's purpose?

A to challenge previous research
B to propose new areas to investigate
C to summarise a scholarly debate
D to suggest reasons for human migration

29 The writer refers to the 'late' model in order to

A compare it with another theory of migration.
B evaluate the success of American migration.
C criticise the speed of research into migration.
D compare migration in different parts of the world.

30 What is the writer's main point about the 'early' model?

A Scholars support the idea of fast migrations.
B It is too random to be a convincing theory.
C South America was more habitable at an earlier time.
D It is more consistent with the physical conditions of the land.

31 What does the writer suggest about the Monte Verde site?

A It is much younger than researchers once estimated.
B It provides supporting evidence for relatively early settlement.
C Archaeologists believe the site is of questionable value.
D Streams exposed the site, making new research possible.

TRUE IELTS

Questions 32–35

Do the following statements agree with the claims of the writer in Reading Passage 3?

In boxes 32–35 on your answer sheet, write

YES	*if the statement agrees with the claims of the writer*
NO	*if the statement contradicts the claims of the writer*
NOT GIVEN	*if it is impossible to say what the writer thinks about this*

32 The conditions encountered by the first migrants to Patagonia were unique.

33 In the high country the first migrants hunted wild animals for food.

34 Archaeologists have failed to draw conclusions from the evidence found at rock shelters in Argentina and Chile.

35 Archaeological evidence can be moved from place to place in a variety of ways.

TRUE IELTS

Questions 36–40

*Complete the summary using the list of words and phrases, **A–J**, below.*

*Write the correct letter, **A–J**, in boxes 36–40 on your answer sheet.*

The archaeological evidence from Patagonia

Building remains and other evidence have been found in **36** _____ at the Chinchihuapi Creek site, and because of this it has been possible to date them to around 12,500 years ago. However, the **37** _____ of the samples taken from Los Toldos means that this site is of doubtful value. El Ceibo is a more promising dig, where the examination of artefacts would be beneficial in order to confirm the usefulness of discoveries there. The remains found at the Arroyo Eeo site show **38** _____ and date from around 9,000 years ago. Unfortunately, no **39** _____ can be made between the samples taken from Las Buitreras and human presence. The findings of the work carried out at Cueva Fell cannot provide useful information beyond the **40** _____. In conclusion, though the evidence is mixed, it is believed that the human population of Patagonia began about 11,000 years ago.

A fixed date
B random collection
C similar properties
D good condition
E scientific evaluation
F huge quantities
G new samples
H reliable connection
I skilled preservation
J immediate surroundings

TRUE IELTS

ĐÁP ÁN:

27. C: Việc di cư đến Patagonia có tác động đến các nghiên cứu về khu vực rộng lớn hơn (vì nó tạo ra một "đường cơ sở" để tính toán tốc độ phân tán dân cư trên cả hai lục địa)
Đoạn chứa đáp án:

The earliest occupation of Patagonia carries obvious implications for understanding when the North and South American continents were peopled, because it gives a baseline that all calculations regrading the rate of dispersion of humans throughout both continents must take into account.

28. C: Mục đích của đoạn 2 là tóm tắt một cuộc tranh luận học thuật về thời gian định cư (tranh luận giữa mốc 20.000 năm và 8.000 năm trước)
Đoạn chứa đáp án:

However, fundamental disagreements developed concerning the length of time involved. Some scholars accepted a human presence in the Americas as early as 20,000 years ago, while others proposed that it could date no earlier than 8,000 years ago, and the debate is still with us today.

29. A: Tác giả đề cập đến mô hình "muộn" (late model) để so sánh nó với một lý thuyết di cư khác (mô hình "sớm" - early model)
Đoạn chứa đáp án:

The 'late' model demands a hypothetical migration conceived of as a single continually advancing wave of settlement. This has always been difficult to take seriously and many scholars now support the idea of an 'early' model that sees the migration as a less ordered migration, and this is surely the most realistic scenario as migrants slowly adapted to the diverse natural habitats they would have met while travelling through the continent.

30. D: Điểm chính về mô hình "sớm" là nó nhất quán hơn với các điều kiện vật lý của vùng đất (di cư diễn ra chậm và thích nghi dần với các môi trường sống đa dạng)
Đoạn chứa đáp án:

This has always been difficult to take seriously and many scholars now support the idea of an 'early' model that sees the migration as a less ordered migration, and this is surely the most realistic scenario as migrants slowly adapted to the diverse natural habitats they would have met while travelling through the continent.

31. B: Di tích Monte Verde cung cấp bằng chứng hỗ trợ cho việc định cư tương đối sớm (có niên đại 12.500 năm, gây nghi ngờ cho mô hình "muộn")
Đoạn chứa đáp án:

Nevertheless, evidence for human occupation of the centre of South America is now securely dated to around 12,500 years ago at the Monte Verde site, which casts doubt on the 'late' model.

32. NO: Các điều kiện mà những người di cư đầu tiên gặp phải ở Patagonia là duy nhất. (Sai, vì bài đọc nói môi trường này tương tự như châu Âu thời kỳ sau băng hà)
Đoạn chứa đáp án:

We can speculate then that the retreat of the Patagonian glaciers around 14,000 years ago allowed the initial human intrusion into a pristine environment, which was similar to that of early post-glacial Europe.

33. NOT GIVEN: Ở vùng cao, những người di cư đầu tiên đã săn bắt động vật hoang dã để làm thức ăn. (Bài đọc có nhắc đến vùng cao nhưng không đề cập cụ thể đến việc săn bắn)

34. NO: Các nhà khảo cổ học đã thất bại trong việc đưa ra kết luận từ bằng chứng tại các hốc đá ở Argentina và Chile. (Sai, vì có bằng chứng tin cậy xác nhận sự hiện diện của con người vào khoảng 11.000 năm trước)
Đoạn chứa đáp án:

There is, however, reliable evidence from these sites to confirm the presence of humans by around 11,000 years ago in different habitats and some hints of an even older occupation.

35. YES: Bằng chứng khảo cổ học có thể bị di chuyển từ nơi này sang nơi khác theo nhiều cách khác nhau (như thông qua lũ lụt hoặc các loài thú săn mồi)
Đoạn chứa đáp án:

This is because anthropologists have come to recognise that bones or other evidence may be deposited in caves by natural agency, in other words by other forces such as floods or predators, and not necessarily by humans.

36. D (good condition): Tại di tích Chinchihuapi Creek, các hiện vật gỗ được tìm thấy trong **tình trạng tốt** nhờ lớp than bùn bảo quản hiệu quả
Đoạn chứa đáp án:

They were buried in layers of peat, which has the property of preserving wood remarkably well, and as a result radiocarbon dating* tests have shown these artefacts to date from around 12,500 years ago.

37. B (random collection): Việc **thu thập ngẫu nhiên** (không hệ thống) các mẫu tại Los Toldos khiến giá trị của di tích này bị nghi ngờ
Đoạn chứa đáp án:

However, the evidence from this site has recently been called into question, because dispersed flecks of carbon used in the test process were taken unsystematically from many different places in the site.

38. C (similar properties): Các hiện vật tại Arroyo Eeo cho thấy những **đặc tính tương đồng** (cùng độ sâu và nguồn gốc) với các hiện vật ở Los Toldos
Đoạn chứa đáp án:

The artefacts from the earliest occupations were found at the same depth and have the same origins as those from Los Toldos, and have been securely dated to around 9,000 years ago.

39. H (reliable connection): Không thể thiết lập một **mối liên hệ đáng tin cậy** giữa các mẫu tại Las Buitreras và sự hiện diện của con người
Đoạn chứa đáp án:

However, anthropologists now believe that presumed cut marks on the bones are somewhat dubious, and despite detailed testing there is no way of securely relating any of these remains with human occupation.

40. J (immediate surroundings): Các phát hiện tại Cueva Fell không thể cung cấp thông tin hữu ích vượt ra ngoài **khu vực lân cận trực tiếp** của nó
Đoạn chứa đáp án:

However, it is now recognised that the utility of this site must be restricted to its direct vicinity, given changes to the nearby area caused by flooding, and findings cannot be freely extrapolated further afield.

TRUE IELTS
