Test 7:

READING PASSAGE 1

*You should spend about 20 minutes on **Questions 1–13**, which are based on Reading Passage 1 on pages 2 and 3.*

The Baobabs of Madagascar

The ancient baobabs of Madagascar are some of the largest and most distinctive trees in the world, but they face an uncertain future

The island of Madagascar in the Indian Ocean is the best place in the world to see baobabs. These spectacular trees, with their massive trunks and distinctive horizontal root-like branches, can live over 800 years. Of the eight known species, six are found only there, while a seventh has made its way across the Mozambique Channel from mainland Africa with a certain amount of human help. Some of the most visited and photographed baobabs in Madagascar are at the Avenue des Baobabs in the western province of Menabe, close to the town of Morondava. There, a dozen trees straddle a narrow sandy road, soaring 30 metres into the sky. Known as renala – 'mother of the forest' – in the local Malagasy language, these trees belong to the tallest baobab species in the world: *Adansonia grandidieri*, named after two great 19th-century French botanists, Michel Adanson and Alfred Grandidier.

Baobabs have religious and spiritual significance for many Malagasy tribes, although the majority of the island's population will probably never see one — they only grow along the western margin of the island and not in the more populous central highlands. However, as the national tree and the national emblem, the trees are an ideal symbol for increasing awareness not only of the endangered forests, but also of the traditional beliefs of the people who live alongside them. But what does the future hold for the Malagasy baobabs?

The Avenue des Baobabs is something of a contradiction; the 'natural' scene that tourists visit is actually man-made. While the trees themselves are natural enough, the surrounding landscape was created by humans. Back in the early 20th century, much of the Morondava plain was cleared for rice and sugar-cane fields. However, many baobabs were spared because they are valuable as a food source and renewable building material, or they simply survived the fires that were set to clear the dry deciduous forest around them. These days many stand alone in fields, a reminder of where the forest once was. But now it seems that even the mighty baobabs are falling down. 'Every year I see new trees that have fallen,' says Jim Bond, an ethnobotanist who has studied Madagascar's baobabs for more than a decade. The exact cause of the falling baobabs is uncertain, but some people think that the water used to irrigate the nearby fields is partly to blame. Baobabs are adapted to the annual wet season, but their roots can't cope with constantly waterlogged soils. Lone trees separated from the surrounding forest are also susceptible to cyclones, which reach speeds of over 200 kph in the area, and can easily uproot even a 30-meter baobab.

Baobabs elsewhere on the island are also facing a host of threats, with three of the six native species now listed as endangered by the World Conservation Union. David Baum from the University of Wisconsin has spent years researching Malagasy baobabs. ‘The main threat to their survival is land clearance for farming, which probably suppresses regeneration,’ he says. Burning is the usual method of clearing land, and while baobabs have some resistance to this, they will eventually succumb to repeated burning. Human disturbance in the forest, such as logging, is also a problem. This practice may be promoting the rapid spread of shrubby undergrowth, which quickly fills in the bright forest gaps needed for baobab germination. Another problem the trees face is the dispersal of their seeds. Baum suggests that dispersal is being limited by the absence of two large, now extinct animals — a gorilla-sized lemur and the three-metre-tall elephant bird. Passage through the digestive tract of these giant fruit-eating animals probably once played a vital role in the distribution of the renala baobabs in particular.

The Malagasy government is becoming increasingly concerned, as the baobab is key to the local tourism industry, and thus to the economy of the island as a whole. But visiting and photographing the solitary trees in the dramatic open landscape at the Avenue des Baobabs isn’t the only way to experience baobabs in Madagascar. Within a few hours’ drive of Morondava, three species of baobab can be seen in largely intact, dry forest habitat. Jim Bond has led expeditions of Malagasy and foreign participants to the Mike forest in the island’s southwest, which is almost certainly one of the least studied and least damaged areas of baobab forest left in Madagascar. On his expeditions Bond works closely with local people to search for, and create maps of baobab distribution. He also plans to compile an illustrated children’s book of the many local folk-tales about the tree, hoping that national and international versions will help to spread the word about how important baobabs are in Malagasy culture. But it’s going to require some swift and coordinated action to ensure that the baobab becomes a symbol of conservation success, rather than a symbol of humanity’s mistakes.

Questions 1–6

Do the following statements agree with the information given in Reading Passage 1?

In boxes 1–6 on your answer sheet, write

TRUE	if the statement agrees with the information
FALSE	if the statement contradicts the information
NOT GIVEN	if there is no information on this

1. All of the baobab species found in Madagascar are unique to the island.

2. Adanson and Grandidier were the first foreign botanists to visit Madagascar.

3. The baobab can be found in most areas of Madagascar.

4. The landscape around the Avenue des Baobabs is the result of agricultural development.

5. The baobab provides useful products for the local people.

6. There is general agreement about the reasons for baobabs falling down.

TRUE IELTS

Questions 7–13

Complete the notes below.

Choose **ONE WORD ONLY** from the passage for each answer.

Write your answers in boxes 7–13 on your answer sheet.

Baobabs under threat

Reasons why Madagascar's baobabs are declining in number:

- **Morondava area**
  - trees may be falling down because of **7.** _____ from nearby fields
  - lone trees are at risk from **8.** _____
- **Forest areas**
  - land clearance: mainly by burning
    - carried out to create space for **9.** _____ activity
    - practice of **10.** _____ makes seed germination difficult
    - disappearance of certain **11.** _____ which dispersed baobab seeds

Jim Bond's efforts to record information about the baobab:

- making **12.** _____ of areas of relatively undamaged baobab forest
- producing a **13.** _____ showing importance of baobab in local culture

ĐÁP ÁN:

1. FALSE (Đoạn 1: Trong số 8 loài, chỉ có 6 loài là duy nhất ở đảo, loài thứ 7 đến từ lục địa Châu Phi)

Đoạn chứa đáp án:

Of the eight known species, six are found only there, while a seventh has made its way across the Mozambique Channel from mainland Africa with a certain amount of human help.

2. **NOT GIVEN** (Bài viết có nhắc tên hai nhà thực vật học này nhưng không khẳng định họ là những người nước ngoài *đầu tiên* đến đây)

Đoạn chứa đáp án:

Known as renala – 'mother of the forest' - in the local Malagasy* language, these trees belong to the tallest baobab species in the world: Adansonia grandidieri, named after two great 19th-century French botanists, Michel Adanson and Alfred Grandidier.

3. FALSE (Đoạn 2: Chúng chỉ mọc dọc theo rìa phía tây và không có ở vùng cao nguyên trung tâm đông dân cư)

Đoạn chứa đáp án:

Baobabs have religious and spiritual significance for many Malagasy tribes, although the majority of the island's population will probably never see one – they only grow along the western margin of the island and not in the more populous central highlands

4. TRUE (Đoạn 3: Cảnh quan xung quanh đại lộ là do con người tạo ra khi phát quang để trồng lúa và mía)

Đoạn chứa đáp án:

While the trees themselves are natural enough, the surrounding landscape was created by humans. Back in the early 20th century, much of the Morondava plain was cleared for rice and sugar-cane fields.

5. TRUE (Đoạn 3: Cây được giữ lại vì là nguồn thực phẩm và vật liệu xây dựng có thể tái tạo)

Đoạn chứa đáp án:

However, many baobabs were spared because they are valuable as a food source and renewable building material, or they simply survived the fires that were set to clear the dry deciduous forest around them.

6. FALSE (Đoạn 3: Nguyên nhân chính xác vẫn chưa chắc chắn - "uncertain", một số người nghĩ là do tưới tiêu, số khác đổ lỗi cho lốc xoáy)

Đoạn chứa đáp án:

The exact cause of the falling baobabs is uncertain, but some people think that the water used to irrigate the nearby fields is partly to blame.

7. water (Đoạn 3: "...water used to irrigate the nearby fields is partly to blame")

Đoạn chứa đáp án:

The exact cause of the falling baobabs is uncertain, but some people think that the water used to irrigate the nearby fields is partly to blame.

8. cyclones (Đoạn 3: "Lone trees... are also susceptible to cyclones")

Đoạn chứa đáp án:

Baobabs are adapted to the annual wet season, but their roots can’t cope with constantly waterlogged soils. Lone trees separated from the surrounding forest are also susceptible to cyclones, which reach speeds of over 200 kph in the area, and can easily uproot even a 30-metre baobab.

9. farming (Đoạn 4: "...land clearance for farming")

Đoạn chứa đáp án:

David Baum from the University of Wisconsin has spent years researching Malagasy baobabs. ‘The main threat to their survival is land clearance for farming, which probably suppresses regeneration,’ he says.

10. logging (Đoạn 4: "...Human disturbance in the forest, such as logging, is also a problem")

Đoạn chứa đáp án:
Human disturbance in the forest, such as logging, is also a problem. This practice may be promoting the rapid spread of shrubby undergrowth, which quickly fills in the bright forest gaps needed for baobab germination.

11. animals (Đoạn 5: "...absence of two large, now extinct animals")
Đoạn chứa đáp án:
Another problem the trees face is the dispersal of their seeds. Baum suggests that dispersal is being limited by the absence of two large, now extinct animals– a gorilla – sized lemur and the three-metre-tall elephant bird. Passage through the digestive tract of these giant fruit-eating animals probably once played a vital role in the distribution of the renala baobabs in particular.

12. maps (Đoạn 6: "...create maps of baobab distribution")
Đoạn chứa đáp án:
On his expeditions Bond works closely with local people to search for, and create maps of baobab distribution.

13. book (Đoạn 6: "...compile an illustrated children's book of the many local folk-tales")
Đoạn chứa đáp án:
He also plans to compile an illustrated children’s book of the many local folk-tales about the tree, hoping that national and international versions will help to spread the word about how important baobabs are in Malagasy culture.

READING PASSAGE 2

*You should spend about 20 minutes on **Questions 14-26**, which are based on Reading Passage 2 on the following pages.*

Questions 14–19

*Reading Passage 2 has six paragraphs, **A–F**.*

Choose the correct heading for each paragraph from the list of headings below.

*Write the correct number, **i-viii**, in boxes 14-19 on your answer sheet.*

List of headings

i Different areas of professional expertise

ii Reasons why it is unfair to criticise lawyers

iii The disadvantages of the legal system

iv The law applies throughout our lives

v The law has affected historical events

vi A negative regard for lawyers

vii The public's increasing ability to influence the law

viii Growth in laws

14 Paragraph **A**

15 Paragraph **B**

16 Paragraph **C**

17 Paragraph **D**

18 Paragraph **E**

19 Paragraph **F**

The Importance of Law

TRUE IELTS

A The law influences all of us virtually all the time. It governs almost all aspects of our behaviour, and even what happens to us when we are no longer alive. It affects us from the embryo onwards. It governs the air we breathe, the food and drink we consume, our travel, family relationships, and our property. It applies at the bottom of the ocean and in space. Each time we examine a label on a food product, engage in work as an employee or employer, travel on the roads, go to school to learn or to teach, stay in a hotel, borrow a library book, create or dissolve a commercial company, play sports, or engage the services of someone for anything from plumbing a sink to planning a city, we are in the world of law.

B Law has also become much more widely recognised as the standard by which behaviour needs to be judged. A very telling development in recent history is the way in which the idea of law has permeated all parts of social life. The universal standard of whether something is socially tolerated is progressively becoming whether it is legal, rather than something that has always been considered acceptable. In earlier times, most people were illiterate. Today, by contrast, a vast number of people can read, and it is becoming easier for people to take an interest in law, and for the general population to help actually shape the law in many countries. However, law is a versatile instrument that can be used equally well for the improvement or the degradation of humanity.

C This, of course, puts law in a very significant position. In our rapidly developing world, all sorts of skills and knowledge are valuable. Those people, for example, with knowledge of computers, the internet, and communications technology are relied upon by the rest of us. There is now someone with IT skills or an IT help desk in every UK school, every company, every hospital, every local and central government office. Without their knowledge, many parts of commercial and social life today would seize up in minutes. But legal understanding is just as vital and as universally needed. The American comedian Jerry Seinfeld put it like this, ‘We are all throwing the dice, playing the game, moving our pieces around the board, but if there is a problem, the lawyer is the only person who has read the inside of the top of the box.’ In other words, the lawyer is the only person who has read and made sense of the rules.

D The number of laws has never been greater. In the UK alone, about 35 new Acts of Parliament are produced every year, thereby delivering thousands of new rules. The legislative output of the British Parliament has more than doubled in recent times from 1,100 pages a year in the early 1970s, to over 2,500 pages a year today. Between 1997 and 2006, the legislature passed 365 Acts of Parliament and more than 32,000 legally binding statutory instruments. In a system with so much law, lawyers do a great deal not just to vindicate the rights of citizens and organisations but also to help develop the law through legal arguments, some of which are adapted by judges to become laws. Law courts can and do produce new law and revise old law, but they do so having heard the arguments of lawyers.

E However, despite their important role in developing the rules, lawyers are not universally admired. Anti-lawyer jokes have a long history going back to the ancient Greeks. More recently, the son of a famous Hollywood actor was asked at his junior school what his father did for a living, to which he replied, ‘My daddy is a movie actor, and sometimes he plays the good guy, and sometimes, he plays the lawyer.’ For balance, though, it is worth remembering that there are and have been many heroic and revered lawyers such as the

Roman philosopher and politician Cicero, and Mahatma Gandhi, the Indian campaigner for Independence.

F People sometimes make comments that characterise lawyers as professionals whose concerns put personal reward above truth, or who gain financially from misfortune. There are undoubtedly lawyers that would fit that bill, just as there are some scientists, journalists and others in that category. But, in general, it is no more just to say that lawyers are bad because they make a living from people's problems than it is to make the same accusation in respect of nurses or IT consultants. A great many lawyers are involved in public law work, such as that involving civil liberties, housing and other issues. Such work is not lavishly remunerated and the quality of the service provided by these lawyers relies on considerable professional dedication. Moreover, much legal work has nothing to do with conflict or misfortune, but is primarily concerned with drafting documents. Another source of social dissatisfaction for lawyers, and disaffection for the law, is a limited public understanding of how law works and how it could be changed. Greater clarity about these issues, maybe as a result of better public relations, would reduce many aspects of public dissatisfaction with the law.

TRUE IELTS

Questions 20–21

*Choose **TWO** letters, **A–E**.*

Write the correct letters in boxes 20–21 on your answer sheet.

Which **TWO** of the following statements does the writer make about legal skills in today's world?

A There should be a person with legal training in every hospital.

B Lawyers with experience in commercial law are the most in demand.

C Knowledge of the law is as important as having computer skills.

D Society could not function effectively without legal experts.

E Schools should teach students about the law.

Questions 22–26

Complete the summary below.

*Choose **ONE WORD ONLY** from the passage for each answer.*

Write your answers in boxes 22–26 on your answer sheet.

Lawyers as professionals

People sometimes say that **22** _____ is of little interest to lawyers, who are more concerned with making money. This may well be the case with some individuals, in the same way that some **23** _____ or scientific experts may also be driven purely by financial greed. However, criticising lawyers because their work is concerned with people's problems would be similar to attacking IT staff or **24** _____ for the same reason. In fact, many lawyers focus on questions relating, for example, to housing or civil liberties, which requires them to have **25** _____ to their work. What's more, a lot of lawyers' time is spent writing **26** _____ rather than dealing with people's misfortunes.

TRUE IELTS

ĐÁP ÁN:

14. Paragraph A: iv (Luật pháp áp dụng trong suốt cuộc đời chúng ta - từ phôi thai cho đến khi không còn sống)

o Explanation: Paragraph A provides a long list of examples of how the law governs all aspects of life, from "the embryo onwards" to "the bottom of the ocean and in space." This matches heading iv, "The law applies throughout our lives."

15. Paragraph B: vii (Khả năng ngày càng tăng của công chúng trong việc gây ảnh hưởng đến luật pháp - nhờ biết chữ và dễ dàng tiếp cận thông tin hơn)

o Explanation: Paragraph B discusses how increased literacy means "it is becoming easier for people to take an interest in law, and for the general population to help actually shape the law..." This matches heading vii, "public's increasing ability to influence the law."

16. Paragraph C: i (Các lĩnh vực chuyên môn nghiệp vụ khác nhau - so sánh vai trò của chuyên gia CNTT và luật sư)

o Explanation: Paragraph C compares the need for legal knowledge to the need for IT skills, stating "legal understanding is just as vital." This is a comparison of different areas of professional expertise, matching heading i.

17. Paragraph D: viii (Sự gia tăng của các bộ luật - số lượng các đạo luật và văn bản pháp lý tăng vọt tại Anh)

o Explanation: Paragraph D is full of statistics about the increasing number of laws and pages of legislation ("The number of laws has never been greater... legislative output... has more than doubled..."). This matches heading viii, "growth in laws."

18. Paragraph E: vi (Cái nhìn tiêu cực về luật sư - lịch sử các câu chuyện đùa về luật sư)

o Explanation: Paragraph E introduces the idea that "lawyers are not universally admired" and provides examples like "Anti-lawyer jokes" and a child's comment equating lawyers with 'bad guys'. This matches heading vi, "A negative regard for lawyers."

19. Paragraph F: ii (Lý do tại sao việc chỉ trích luật sư là không công bằng - so sánh với các nghề nghiệp khác cũng dựa trên vấn đề của con người)

o Explanation: Paragraph F refutes criticisms against lawyers, stating it is "no more just to say that lawyers are bad... than it is to make the same accusation in respect of nurses or IT consultants." This defends lawyers and explains why criticism is unfair, matching heading ii.

20. C (Kiến thức về luật pháp cũng quan trọng như kỹ năng máy tính)

o Explanation: Paragraph C states that after describing the importance of computer skills, "But legal understanding is just as vital and as universally needed." This directly supports statement C.

21. D (Xã hội không thể vận hành hiệu quả nếu thiếu các chuyên gia pháp lý)

o Explanation: Paragraph C compares legal skills to IT skills, stating that without IT skills, "many parts of commercial and social life today would seize up in minutes." It then says legal understanding is "just as vital," strongly implying society could not function effectively without legal experts.

22. truth (Mọi người đôi khi nói rằng **sự thật** ít được luật sư quan tâm, họ lo kiếm tiền hơn)

o Explanation: The text says people characterize lawyers as professionals whose concerns put "personal reward above truth."

23. journalists (Cũng giống như một số **nhà báo** hoặc chuyên gia khoa học có thể bị thúc đẩy bởi lòng tham tài chính)

o Explanation: The text states some lawyers might fit the greedy description, "just as there are some scientists, Journalists and others in that category."

24. nurses (Chỉ trích luật sư vì công việc liên quan đến rắc rối của con người cũng tương tự như tấn công nhân viên CNTT hay **y tá** vì lý do tương tự)

o Explanation: The text says criticizing lawyers for dealing with problems is like making "the same accusation in respect of nurses or IT consultants."

25. dedication (Nhiều công việc về quyền dân sự đòi hỏi luật sư phải có sự **tận tâm** với công việc của họ) (P2 - The I... p. 3)

o Explanation: The passage states that for work involving civil liberties and housing, "the quality of the service provided by these lawyers relies on considerable professional dedication."

26. documents (Rất nhiều thời gian của luật sư dành cho việc soạn thảo **văn bản/tài liệu** thay vì đối phó với những rủi ro của con người) (P2 - The I... p. 3)

o Explanation: The text says that "much legal work... is primarily concerned with drafting documents."

READING PASSAGE 3

*You should spend about 20 minutes on **Questions 27–40**, which are based on Reading Passage 3 below.*

The Exploration of Mars

A

In 1877, Giovanni Schiaparelli, an Italian astronomer, made drawings and maps of the Martian surface that suggested strange features. The images from telescopes at that time were not as sharp as today's. Schiaparelli said he could see a network of lines, or *canali*. In 1894, an American astronomer, Percival Lowell, made a series of observations of Mars from his own observatory at Flagstaff, Arizona, U.S.A. Lowell was convinced a great network of canals had been dug to irrigate crops for the Martian race. He suggested that each canal had fertile vegetation on either side, making them noticeable from Earth. Drawings and globes he made show a network of canals and oases all over the planet.

B

The idea that there was intelligent life on Mars gained strength in the late 19th century. In 1898, H. G. Wells wrote the science-fiction classic *The War of the Worlds* about an invading force of Martians who try to conquer Earth. They use highly advanced technology (advanced for 1898) to crush human resistance. In 1917, Edgar Rice Burroughs wrote the first in a series of 11 novels about Mars. Strange beings and rampaging Martian monsters gripped the public's imagination. A radio broadcast by Orson Welles on Halloween night in 1938 of *The War of the Worlds* caused widespread panic across America; people ran into the streets in their pyjamas—millions believed the dramatic reports of a Martian invasion.

C

Probes are very important to our understanding of other planets. Much of our recent knowledge comes from these robotic missions into space. The first images sent back from Mars came from Mariner 4 in July 1965. They showed a cratered and barren landscape, more like the surface of our Moon than Earth. In 1969, Mariners 6 and 7 were launched and took 200 photographs of Mars's southern hemisphere and pole on fly-by missions, but these revealed little more information. In 1971, Mariner 9 became the first spacecraft to orbit the planet, circling every 12 hours. In 1975, the U.S.A. sent two Viking probes, each with an orbiter and a lander. The landers had sampler arms to scoop up Martian rocks and carried out experiments to try to find signs of life. Although no life was found, they sent back the first colour pictures of the planet's surface and atmosphere from pivoting cameras.

D

A Martian meteorite found on Earth raised fresh doubts about the above analysis. Meteorite ALH 84001 was discovered in December 1984 in Antarctica by members of the ANSMET project. The sample was ejected from Mars about 17 million years ago and spent 11 000 years in, or on, Antarctic ice sheets. NASA's compositional analysis revealed a kind of magnetite that on Earth is only found in association with certain micro-organisms. Some structures resemble the mineralised casts of terrestrial bacteria and their appendages, fibrils or by-products occurring in the rims of carbonate globules and pre-terrestrial

aqueous-alteration regions. The size and shape of the objects are consistent with Earthly fossilised nanobacteria, but the very existence of nanobacteria is still controversial.

E

In 1965, the Mariner 4 probe discovered that Mars had no global magnetic field to protect the planet from potentially life-threatening cosmic and solar radiation; observations made in the late 1990s by Mars Global Surveyor confirmed this discovery. Scientists speculate that the lack of magnetic shielding helped the solar wind blow away much of Mars's atmosphere over several billion years. After mapping cosmic-radiation levels at various depths on Mars, researchers concluded that any life within the first several metres of the planet's surface would be killed by lethal doses of radiation. In 2007 it was calculated that DNA and RNA damage would limit life on Mars to depths greater than 7.5 metres below the surface. Therefore, the best places to look for life may be subsurface environments that have not yet been studied. The disappearance of the magnetic field may have played a significant role in Martian climate change. According to scientists' evaluation, Mars's climate gradually transitioned from warm and wet to cold and dry after the magnetic field vanished.

F

NASA's recent missions have focused on another question: whether Mars had lakes or oceans of liquid water on its surface in the ancient past. Scientists have found hematite, a mineral that forms only in the presence of water. Thus, the 2004 Mars Exploration Rovers were designed not to look for present or past life, but for evidence of ancient liquid water. Because of Mars's current low atmospheric pressure and temperature, liquid water cannot persist at the surface except, briefly, at the lowest shaded elevations. In March 2004, NASA announced that its rover Opportunity had discovered evidence that Mars was once a wet planet. This raised hopes that evidence of past life might still be found. Later the Mars Express orbiter detected huge reserves of water-ice at Mars's south pole in January 2004.

G

Researchers from the Center for Astrobiology (Spain) and the Catholic University of the North in Chile found an *oasis* of micro-organisms two metres below the surface of the Atacama Desert. SOLID, a life-detection instrument, could be used in environments similar to Martian sub-soil. "We have named it a *microbial oasis* because we found micro-organisms developing in a habitat rich in rock salt and other highly hygroscopic compounds that absorb water," explained Victor Parro of the Center for Astrobiology. "If similar microbes, or their remains, exist on Mars under comparable conditions, we could detect them with instruments like SOLID," Parro added.

H

Even more intriguing is an alternative scenario proposed by the Spanish scientists. If samples on Mars were found to use DNA—as Earthly life does—it would be extremely unlikely that such a specialised, complex molecule could have evolved independently on two planets. This would indicate a common origin for Martian and Earth life. Life based on DNA might have appeared first on Mars and then spread to Earth, where it evolved into the myriad plants and creatures alive today. If that proved true, we would face a startling conclusion: we are all Martians. If not, we must continue the search for other signs of life.

Questions 27–32

The reading passage has eight paragraphs, ***A–H****.*

Which paragraph contains the following information?

Write the correct letter, ***A–H****, in boxes 27–32 on your answer sheet.*

27 Martian evidence found on Earth

28 Mars and Earth may share the same origin of life

29 Detailed depiction of large-scale agricultural constructions

30 A project that aims to detect life under conditions similar to those on Mars

31 Mars has undergone drastic climatic transformation

32 Scientific attempts to locate liquid water on Mars

TRUE IELTS

Questions 33–36

*Choose the correct letter, **A, B, C or D**.*

Write your answers in boxes 33–36 on your answer sheet.

33 How did Percival Lowell describe Mars in this passage?

A Arizona provides the perfect location for observation.
B The canals of Mars are wider than those on Earth.
C There are clear traces of water and agriculture similar to Earth's.
D Active, mobile Martian creatures were seen through telescopes.

34 How did people change their view of Mars from the 19th century onwards?

A They experienced a real Martian attack.
B They absorbed new ideas through literary works.
C They learned new concepts by listening to a famous radio programme.
D They attended public lectures given by well-known writers.

35 According to the probes sent in the 1960s, which statement about Mars is correct?

A Its landscape is full of rocks and rivers.
B It appeared far less dynamic than Earth.
C It contained exactly the same substances as the Moon.
D Images differed completely from those taken by later probes.

36 What is the implication of the project using the technology called SOLID in the Atacama Desert?

A It could be employed to explore organisms under Martian-like conditions.
B This technology could not be used to identify life in environments similar to Mars.
C The Atacama Desert is the only place on Earth that suits such organisms.
D Life has not yet been found anywhere in the Atacama Desert.

TRUE IELTS

Questions 37–40

Do the following statements agree with the information given in Reading Passage 3?

In boxes 37–40 on your answer sheet, write

TRUE — if the statement agrees with the information
FALSE — if the statement contradicts the information
NOT GIVEN — if there is no information on this

37 According to *The War of the Worlds*, Martian technology surpassed that of humans in every field at the time.

38 The evidence supplied by the Viking probes has never been challenged.

39 Analysis of a meteorite from Mars discovered a substance associated with certain germs.

40 According to Víctor Parro, their project will be sent to Mars once DNA-based life has been identified on Earth.

TRUE IELTS

ĐÁP ÁN:

27. **D** (Martian evidence found on Earth: Đề cập đến thiên thạch ALH 84001 được tìm thấy tại Nam Cực).
28. **H** (Mars and Earth may share the same origin of life: Giả thuyết về nguồn gốc chung dựa trên DNA).
29. **A** (Detailed depiction of large-scale agricultural constructions: Mô tả của Lowell về mạng lưới kênh đào và thảm thực vật để tưới tiêu cho cây trồng).
30. **G** (A project that aims to detect life under conditions similar to those on Mars: Dự án sử dụng thiết bị SOLID tại sa mạc Atacama).
31. **E** (Mars has undergone drastic climatic transformation: Sự chuyển đổi từ ấm và ướt sang lạnh và khô sau khi mất từ trường).
32. **F** (Scientific attempts to locate liquid water on Mars: Các nhiệm vụ của robot Opportunity và Mars Express để tìm kiếm bằng chứng về nước).
33. **C** (Lowell mô tả có những dấu vết rõ ràng về nước và nông nghiệp tương tự Trái Đất).
34. **B** (Người dân thay đổi cách nhìn thông qua các tác phẩm văn học như của H.G. Wells và Edgar Rice Burroughs).
35. **B** (Theo các tàu thăm dò thập niên 60, sao Hỏa trông kém "sống động" hơn Trái Đất, với cảnh quan khô cằn giống Mặt Trăng).
36. **A** (Hệ quả của dự án SOLID là nó có thể được dùng để khám phá sinh vật trong các điều kiện giống như sao Hỏa).
37. **NOT GIVEN** (Văn bản nói công nghệ của người Hỏa tiễn là "rất tiên tiến", nhưng không khẳng định nó vượt trội con người trong "mọi lĩnh vực").
38. **NOT GIVEN** (Văn bản đề cập đến kết quả của Viking nhưng không nói về việc liệu nó có bao giờ bị thách thức hay không).
39. **TRUE** (Phân tích thiên thạch tìm thấy magnetite, loại khoáng chất thường liên quan đến một số vi sinh vật nhất định).
40. **FALSE** (Víctor Parro nói thiết bị của họ "có thể được sử dụng" trên sao Hỏa nếu điều kiện tương đồng, chứ không phải sẽ được gửi đi "khi sự sống dựa trên DNA đã được xác định trên Trái Đất").
